

ABRAR BIN ROFIQUE

BACKEND DJANGO DEVELOPER || PROBLEM SOLVER

PROFILE

I am a geography student with a strong passion for the tech world, particularly in web development. Currently, I work at BanglasketchLab, IICT, SUST, where I've gained extensive hands-on experience developing and maintaining web applications. Recently, I have been focusing on backend development with Django and REST APIs, building features such as user authentication, friend management, and group travel planning. Additionally, I have worked with frontend technologies and cloud platforms like Cloudinary and Render to ensure seamless image management and deployment of projects. My experience includes contributing to collaborative projects, debugging complex issues, and creating user-focused features, which have enhanced my problem-solving skills.

I am eager to bring my technical expertise, enthusiasm for learning, and dedication to contributing to your team. I look forward to continuing to grow in this field and making impactful contributions.

WORK EXPERIENCE

Web designer role

I have already worked as a frontend developer at Banglasketch, using **HTML, CSS, Bootstrap, and Django MVT**.

Website link: <https://banglasketch.org/team/>

Projects

- **Homper**: Homper is a website of Homeservice based on **Django rest API**
- **Key Features**:
 - Authentication system
 - Admin can add service add can add a new admin from user pannel
 - Data validation and modeling based on postgresql
 - customer can add service, rating and review service according to rating sorting
 - Performance optimization through caching and query optimization
 - Github Frontend**: <https://github.com/abrarbinrofique/Homper-frontend>
 - Github Backend**: <https://github.com/abrarbinrofique/Homeper-backend>
- **NorMad**: Homper is a Travelplan and share travel Website with friends based on Django rest API
- **Key Features**:
 - Authentication system
 - can be friends with other user
 - Admin and user both can add travel and share travel with friends
 - Data validation and modeling based on postgresql
 - Traveller can book travel and give review
 - Same travelplan users can discuss about the travelplan in chat
 - Github Frontend**: <https://github.com/abrarbinrofique/NorMad-Frontend>
 - Github Backend**: <https://github.com/abrarbinrofique/NorMad-Bakend>
- I have a strong understanding of object-oriented programming and have developed a bank management system using **OOP concepts**.
